

Inverto Volksbox channel list update

Dear customer,

on 4/30/2012 the analog TV programs are switched off in Germany. Since you are already in possession of a Volksbox Inverto, you will be not affected and well equipped for the digital future of television.

But the TV networks from ARD and ZDF, do at the same time a reorganization of the HD channels, many new HD channels are added and some will be moved to new transponder. These new transponders are still used today for analog broadcast and are therefore not yet known by our Volksbox. So when doing a quick scan the new channels will not be found.

Thus Inverto releases a new software version (V1_34_1_249) with updated transponder and channel lists at the same time. As usual you can then install the update, either directly via the Internet or download it from the Internet on www.inverto.tv/support.

Due to the many changes on the channel database, we we highly recommend you to make a factory reset after the update (Menu → Settings → Factory settings (Pin: 0000) → Factory defaults) including a new channel search.

Another option is the advanced channel search, you can scan a single transponder. You can find this option in the menu:

Menu → Control panel → Channel search → Advanced channel search
You can enter the new transponder data manually.

The following information is needed for the search:

Frequency in MHz

Polarity

Symbol rate in ksymb/ s
and the DVB-S2 mode.

A screenshot of the 'Advanced channel search' menu on an Inverto Volksbox. The menu is displayed on a dark background with red and white text. At the top, there is a 'Help message' section with the text 'Please input the reference transponder frequency value (ex: 10758)'. Below this, the 'Advanced channel search' title is shown, along with the date and time 'Fri 27 Apr, 13:11'. The main menu items are: Satellite (19.2°E ASTRA 1F,H,KR,L,M), Ref. transponder (None), Frequency (11856), Polarity (Vertical), Symbol rate (27500), DVB-S2 (No), FEC (Automatic), and Channels (All). At the bottom, there are 'Exit' and 'Start search' options. On the right side, there are two progress bars: 'signal quality(91 %)' and 'signal strength(70 %)'.

Here, the individual data of the new transponder:

Transponder for Das Erste HD, SWR HD and arte HD

Frequency: 11494MHz, Symbol rate: 22000ksymb/s, Polarity: Horizontal, DVB-S2: Yes

Transponder for BR HD, NDR HD and Phoenix HD

Frequency: 11582MHz, Symbol rate: 22000ksymb/s, Polarity: Horizontal, DVB-S2: Yes

Transponder for 3Sat HD, ZDF info HD and KiKa HD

Frequency: 11347MHz, Symbol rate: 22000ksymb/s, Polarity: Vertical, DVB-S2: Yes

all the other new HD channels are already known to be a Frequency and fast search and found easily placed at the end of the channel list.

Inverto Volksbox channel list update

We are working on an updated channel list, which we will provide on 4/30/12.

You can download the online channel list directly in the receiver menu. You can find this option in the menu:

Menu → Control panel → Factory settings (PIN: 0000) →

Preprogrammed channel lists →

Latest (From Internet)

Here you select the current list now for download, it will be installed automatically.

Note: This option is only available if the device is connected to the Internet.
